

Composition/Aggregation Notation Cheat Sheet

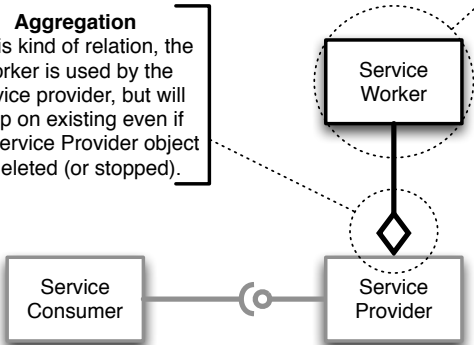

Simplest zoomed-out service consumer and provider diagram.

This component can be an object within the code, or could also be a separate executable, depending on the abstraction level of the diagram.

Aggregation

Aggregation
In this kind of relation, the worker is used by the service provider, but will keep on existing even if the Service Provider object is deleted (or stopped).

Composition

Composition
In this kind of relation, the library is used by the Service Worker and will cease existing if the Worker object is deleted (or stopped).
